Here, are steps to use MVC architecture in CakePHP: Step 1) The client or user interacts with the view. Step 2) View alerts controller of the specific event. Step 3) It sends a database request to the Model and Controller updates the model. Step 4) The model alerts view that it has changed.

CakePHP Framework Tutorial for Beginners

CakePHP is designed to make common web-development tasks simple, and easy. By providing an all-in-one toolbox to get you started the various parts of CakePHP work well together or separately. The goal of this overview is to introduce the general concepts in CakePHP, and give you a quick overview of how those concepts are implemented in CakePHP.

CakePHP Cookbook Documentation

I liked how the book shows step-by-step examples and it explains the code for readers to fully understand what they are doing. I recommend it for people with experience using PHP who may be totally new to the CakePHP framework. It was perfect for me because the book uses the old version of CakePHP that I needed to implement for my project (1.2).
