of the cooler object. 2.

Answer Key Thermal Energy

Thermal energy is the sum of energy possessed by all the moving molecules of the substance, while temperature tells how hot or cold a substance is. It is the measure of how fast or slow the molecules are moving. Temperature indicates the level of thermal energy but it does not

out of the object. You can use the following equation to calculate the change in thermal energy.

change in thermal energy (J) = mass (kg) × change in temperature (°C) × specific heat (J / kg · °C)

$$Q = m(T_f - T_i)C$$

In the equation, Q stands for the change in thermal energy.
