organic compounds, its amount and locations can be assumed from the tetravalency of carbon, and need not be specified in most cases. The IUPAC nomenclature system is a set of logical rules devised and used by organic chemists to circumvent problems caused by arbitrary nomenclature. Knowing these rules and given a structural formula, one should be

The problem with this metric again lies with the vagueness of it. If you know on average that an organic search visitor has spent 2 seconds less on the website this month than they did last month what marketing decision can you make off the back of it? For the people receiving our reports this does not give them any usable insight in isolation. 4.
